

ABSTRACT OF THE DISCLOSURE

- A multi-layered article for establishing a seal between two substrates. The multi-layered article includes a bulk layer and an adhesive layer. The layers of the
- 5 article are generally epoxy-containing, photo-activated materials. Upon photo-activation, the bulk layer and the adhesive layer have different curing rates. The article is suitable for adhering and sealing two substrates together. The article is particularly useful when at least one of the substrates is glass.
